ENGINE-MOUNTED LADDER MAKES RE-BOARDING EASY

Changing a prop or clearing weeds from the motor usually requires a trip overboard. To make re-boarding easier, Bob's Machine Shop offers a new engine-mounted ladder that deploys with a pull of the pin.

The two-step ladder mounts directly on BMS's 8", 10", 12", and 14" jackplates, or for 4" and 6" jackplates over the motor's standard BIA bolt pattern with an optional mounting bracket. It deploys through an oil-impregnated polymer bearing, which minimizes noise from boat vibration and eliminates binding in saltwater. Rubberized rungs are used for comfort and traction.

Operation is easy. A pull on the integrated, spring-loaded pin lowers the ladder for use. When returned to the stowed position, the ladder re-locks into place.

Constructed of aircraft-grade aluminum, the ladder is offered in port- or starboard-side models. It comes with easy-to-use instructions, including a mounting template. BMS's limited lifetime warranty applies.

Suggested retail price is \$199. An optional mounting bracket for boats without jackplates is also available.
